

NAF Control Valves

NAF – The Safe Partner

Experience In Motion

Experience In Motion

Experience – building experience is a constantly ongoing process. It makes a company grow, become more skilled and better at cooperating with its customers. It also makes it a more secure partner in its response to challenges and requirements and in delivering innovative and cost-efficient solutions to the most demanding applications.

At NAF this process started more than a century ago.

NAF is a leading developer and supplier of advanced control units, actuators and valves for complete control and safe operation in pulp and paper industries throughout the world.

NAF – The Innovator

NAF started its operations as long ago as 1899. In 1904 the Company delivered its first stainless steel valves to the process industry. And in 1933 it presented the first ball valve to the world. With its unique many-decades' experience, the Company today is one of the most successful in the effective control of demanding flows, focusing on the pulp and paper industry. Over the course of many years NAF has introduced a range of innovative solutions that meet the stringent requirements of this particular branch of industry. In 2002 the Flowserve Corporation acquired NAF. In turn this gave NAF the added resources it needs to invest in the future and continue to lead development.

Flowserve

FLOWSERVE Corporation is one of the world's leading specialists in industrial flow control focusing on the process industry. With approx. 14,000 employees in 126 companies, a turnover of USD 2.3 billion and operations in 56 countries, Flowserve and NAF have the resources and the experience required to develop and supply solutions and products that help its customers to exceed their objectives by ensuring secure and cost-efficient operations.

Valve packages for demanding applications

The powerful control valve packages from NAF have been developed through its extensive knowledge of the strict requirement specifications that apply to the pulp and paper industry. These products are silent, durable and efficient. They are designed for optimum control of demanding flows with abrasive and corrosive substances, year after year, as well as eliminating cavitation and reducing noise levels. Their high level of quality ensures that NAF control valves can also cope with demanding applications in other industries.

High-performance quarter-turn control valves

NAF specializes in quarter-turn, high-performance, maintenance-free and intelligent control valve packages with direct mounting and where all parts are modular and designed to give combined optimum performance. They are reliable, easy to service and cost-efficient with extremely long life. In addition, they are future-safe by the use of modern technology and innovative solutions. The design and high-level quality of the products is a result of over a century's experience of the extreme requirements of the process industry.

NAF's control valves are installed all over the world.

NAF – All Over the World

From Asia to North America, from South Africa to Scandinavia – the reference list is extensive. NAF's dependable control valves have been installed in process industries in over 40 countries. In many countries they are still in operation after more than 50 years! And new extensive installations are underway. The trust placed in NAF as a skilled problem-solver and reliable supplier is well established and has been strengthened after its integration with Flowserve. Within NAF's wide range of products there is always the right product for the application – from manually controlled valves to complete intelligent control valve packages and special solutions.

The Safe Partner

NAF works close to its customers with mutual exchange and respect for each other's knowledge and requirements. The Company has always been good at listening to and taking care of its customers' requirements and demands. A good balance between trade know-how, quality thinking, resources and dependable products, together with a pronounced service-mindedness, makes NAF a secure long-term partner, always placing you as a customer at the center of its focus. And with its global network of experienced and competent representatives local representation is always guaranteed.

Experience *In Motion*

In Motion – experience in constant forward motion. Never relaxing. Always learning, developing, growing, thinking ahead, having visions. Such a company is a reliable partner. It is always one step ahead and can deliver the best solutions to its customers' problems and requirements.

For over a century NAF has been such a partner. Always moving ahead.

NAF Control Valves

NAF AB started its activities in 1899 and today it's an integral part of the FLOWSERVE Corporation - the world's foremost specialist in intelligent solutions of industrial flow control, with a turnover exceeding USD 2.3 billions. This gives NAF even more resources to invest in the future and continue as a leading supplier of advanced control units, actuators and valves, giving total control and safe operation in the pulp and paper industries in more than 40 countries.
